

Hi,

Now out put are stable and generate 3.3V, and other output with load and without load.
Actually there was wrong connection of LMV431 regulator (anode and cathode was reverse).

Now we face onther problem as under-

suddenly down Output voltage voltage after some time

3.3V_D-down to 2.4V

24V down to 23V and 3.3V_EM -down to 2.7V

After this change LMV431 regulator and resolve the problem.

Please guide us.

Thanks,

Irfan
